Dual Optics

The WAXscope® combines both its own optics with the iPhone camera to deliver exceptional ultra HD images and 4K videos.

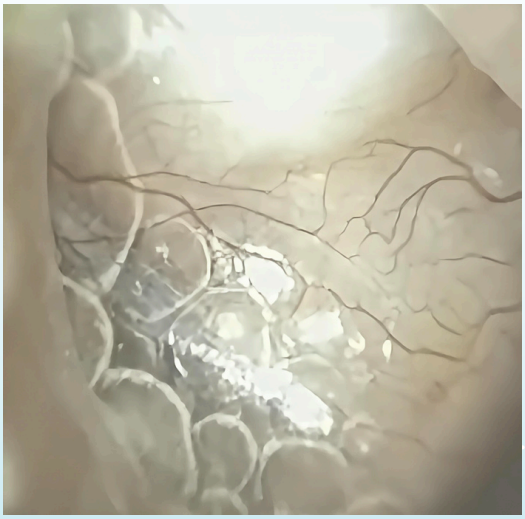

Prominent short process of malleus and attic retraction

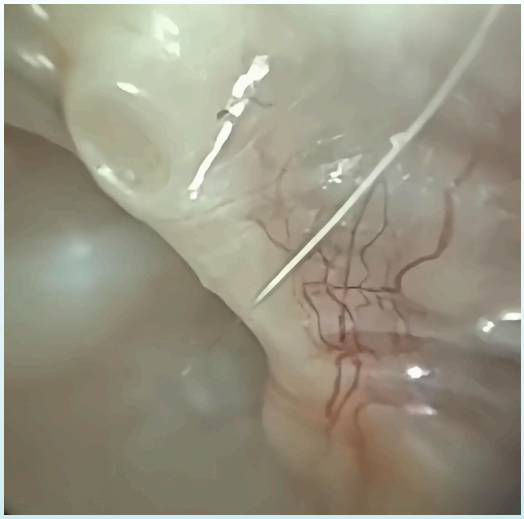

Aspergilis fungal spores coating the tympanic membrane

Magnification & Zoom

Provides magnification comparable to an ENT microscope, with additional pinch-to-zoom functionality on the iPhone.

Middle-ear effusion with air bubbles

Bony re-modelling of short process of the malleus

Ergonomics & Body Posture

Enhanced magnification and integrated iPhone viewing eliminates the need to lean forwards or turn away during procedures.

Magnified viewing allows clinician to look direct at patient

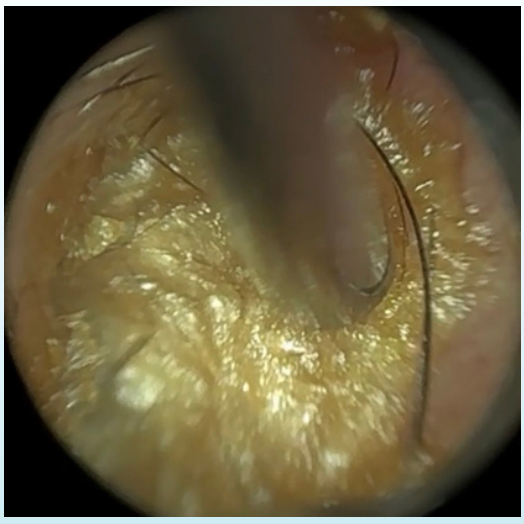

Improved body posture reduces back and neck strain

Enhanced View & Access

Our uniquely designed specula allow both microsuction and manual instrumentation usage without obscuring your view.

Patented specula with unique teardrop design

Clear visualisation of both ear wax and instrumentation

WAXscope®

Upgrade your scope.
Improve your vision.

PROFESSIONAL ELIGIBILITY & TRAINING

The WAXscope® is only available to suitably qualified clinicians. For ear wax removal, clinicians must already be appropriately trained in removal procedures using visualisation (not ear irrigation), by a reputable provider that does not also train non-suitably qualified clinicians. Our online tutorial supports assembly, setup and use. In-person training is available if preferred or still required. See our product webpage for full requirements.
