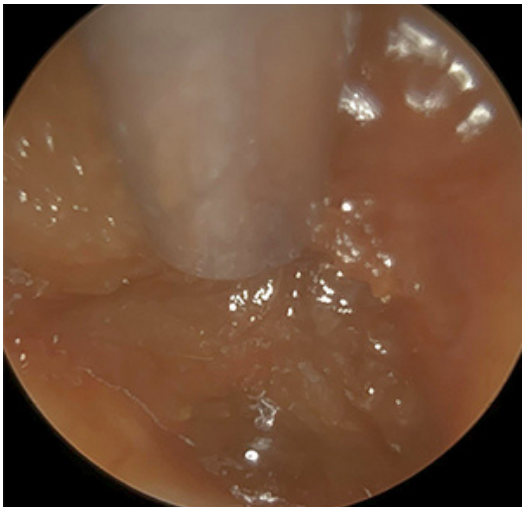
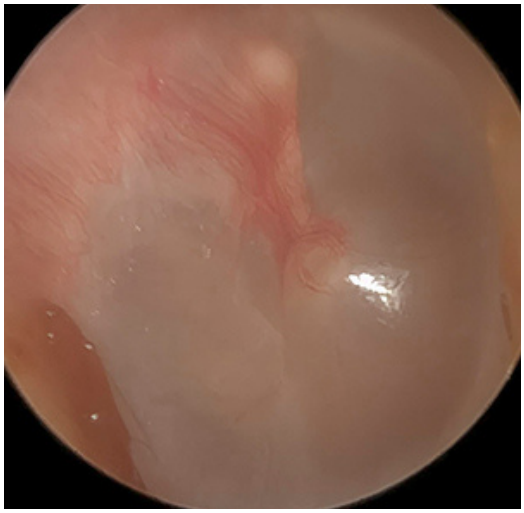
Dual Optics

The iCLEARscope® combines both its own optics with the iPhone camera to deliver exceptional ultra HD images and 4K videos.



Before cerumen removal

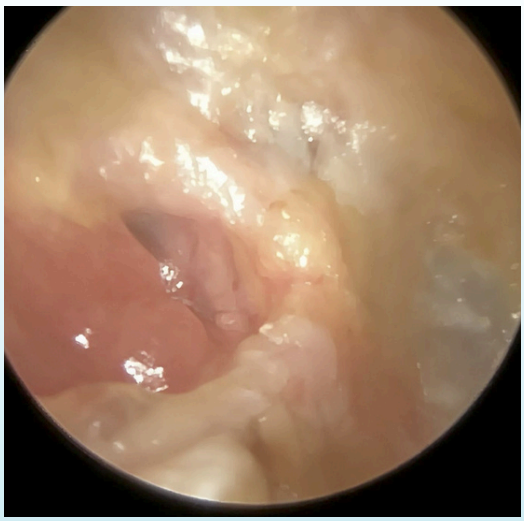


Post cerumen removal

Magnification & Zoom

Provides magnification comparable to an ENT microscope, with additional pinch-to-zoom functionality on the iPhone.

Discharging pinhole tympanic perforation



Granulation tissue within postero-superior retraction pocket

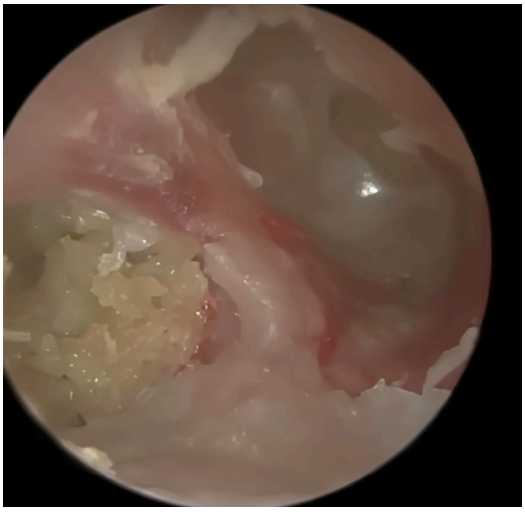
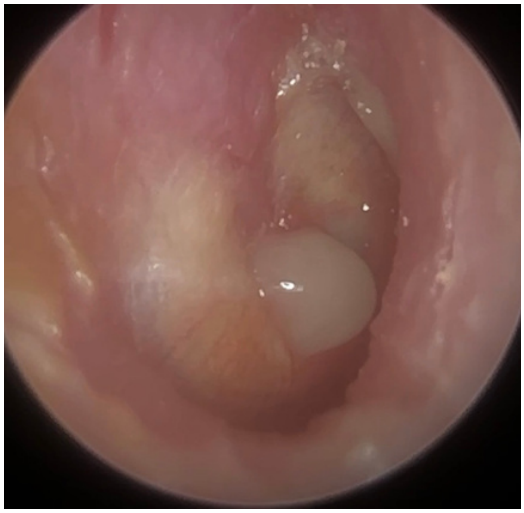
Field of View

Wide panoramic optics allows the clinician to see a global view of the entire ear canal for improved visualisation.



Auto-mastoidectomy due to external canal cholesteatoma



Chronic suppurative otitis media (CSOM)

Wireless & Portable

Completely wireless with no external monitor required, the iCLEARscope® also includes a custom carry case for easy portability.

Fully integrated with no external wires or viewing monitor

Clearwax custom foam carrier case

Ergonomics & Body Posture

Enhanced magnification and integrated iPhone viewing eliminates the need to lean forwards or turn away during procedures.

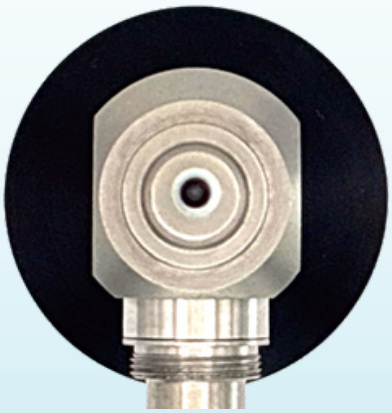
Magnified viewing allows clinician to look direct at patient

Improved body posture reduces back and neck strain

Rod Lens Optics & Dimensions

Custom rod lens optics provide an optimal magnification to field-of-view ratio, with a 2.7mm diameter for narrow ears and 50mm working length for comfortable bracing.

50mm working length rod lens



2.7mm diameter rod lens

Upgrade your scope.
Improve your vision.

PROFESSIONAL ELIGIBILITY & TRAINING

The iCLEARscope® is only available to qualified clinicians. For ear wax removal procedures, clinicians must undertake in-person training, even if already experienced with head loupes, ENT microscopes or the WAXscope®. See our product webpage for full eligibility and training requirements.
